ROW

EARLY DETECTION
SYSTEM FOR OIL
ON WATER

ROW ALUMINUM

Detectable Oils:

motor oils, turbine oils, vegetable oils, lubricant oils, hydraulic oils, mineral oils, gas oils, marine diesel, bunker, fuel & crude oils*, heating oils, diesel, gasoline, kerosene, JetA

* Different oils from each country have different properties. Check with LDI or send samples for testing.

The **ROW** (Remote Optical Watcher) is a non-contact sensor for detecting oil on water. Highly accurate and easy to maintain, the ROW detects and alerts you to unsuspecting oil spills. It provides 24/7 industrial and environmental water monitoring, whether at effluent discharge or influent intake points.

ROW ATEX EXD

For hazardous areas including Zone 1 designations, we offer the ROW ATEX Ex d Oil Detector in a Flameproof (explosion-proof) enclosure with full systems certification by DNV Presafe.

- 316 Stainless steel
- IP68
- 8m range
- 1-micron sensitivity
- 2W power consumption
- System certification ATEX/IECEX
- LDI Manufacturer certified by DNV

ROWs are compatible with standard industrial telemetry outputs (modbus, 4-20mA, relay) and multiple detectors can be networked together.

ROW STAINLESS STEEL

For installations in corrosive conditions, the ROW comes in a Stainless Steel (316L) enclosure.

This model offers the perfect balance between economic costs and rugged design that can be installed in even the toughest environments.

Whether at an oil terminal or on the open seas with the instrument integrated on a buoy, the ROW can handle the elements and connect seamlessly to your local telemetry.

Laser Diagnostic Instruments (LDI) specialises in photonics and software algorithm creating advance fluorescence-based instruments. Located in Estonia (E.U.), LDI is a R&D company and a Manufacturer. All our products are designed and produced in-house. We hold nine core technology patents and continue to innovate our products. As such, you can count on our support for years to come.
